Intro to Data Mining Lecture 1c

Homework 1

Created by Jon Witkowski on 12/28/2023

Topics

- This week in class, we went over the different types of data, the different reasons we'd want to clean it, and different ways of cleaning it. This assignment will cover:
  - Types of attributes
  - Normalization
  - Binarization/Discretization
  - Aggregation/Sampling
  - Principal Component Analysis

(it looks like a lot, but don't worry. Since it's due next week, it'll only be a small assignment)

Link

- Here's a link to the homework. Make a copy of the file and fill in your answers there. The submissions will be locked by file type to only accept Google Docs and Word files. This is your warning. Submit the correct type of file. I don't want to receive an email saying you didn't get it in on time because it wasn't the right file type.
